Sensory Evaluation in Quality Control

Sensory Evaluation in Quality Control

This book addresses an important, but so far neglected, topic: the application of sensory evaluation to quality control. Although several articles have been published that have discussed concepts of quality control/sensory evaluation (QC/sensory) programs, *Sensory Evaluation in Quality Control* is the first publication that addresses this topic in a comprehensive and practical way. This book is comprehensive, in that it presents the sensory and statistical information that is needed to design and implement several types of QC/sensory programs at the plant level. The book is practical, in that it provides a step-by-step description of the complete process to implement such programs, and it illustrates this process through real examples encountered by various consumer products companies (e. g. , foods, personal care products, paper products). With this practical information, sensory and quality professionals can design and implement sound QC/sensory programs at the plant level. This book was developed to provide the sensory and quality professional with an overview and guide to apply, in a production facility, the unique techniques that are used to measure sensory responses. Therefore, the book is intended for QC and/or R&D personnel (e. g. , sensory managers and analysts, and quality professionals) in charge of implementing an in-plant program, as well as for the plant management and plant technical personnel (sensory coordinator and quality professionals) who are ultimately responsible for the routine operation of the established program.
