## Evidence-Based Climate Science: Data opposing CO2 emissions as the primary source of global warming

Global warming and human-induced climate change are perhaps the most important scientific issues of our time. These issues continue to be debated in the scientific community and in the media without true consensus about the role of greenhouse gas emissions as a contributing factor.

Evidence-Based Climate Science: Data opposing CO<sub>2</sub> emissions as the primary source of global warming objectively gathers and analyzes scientific data concerning patterns of past climate changes, influences of changes in ocean temperatures, the effect of solar variation on global climate, and the effect of CO<sub>2</sub> on global climate to clearly and objectively present counter-global-warming evidence not embraced by proponents of CO<sub>2</sub>.

- An unbiased, evidence-based analysis of the scientific data concerning climate change and global warming
- Authored by 8 of the world's leading climate scientists, each with more than 25 years of experience in the field
- Extensive analysis of the physics of CO<sub>2</sub> as a greenhouse gas and its role in global warming
- Comprehensive citations, references, and bibliography
- Adaptation strategies are presented as alternative reactions to greenhouse gas emission reductions
