Robin A., M.D. Hurley, Katherine H., Ph.D. Taber

**Windows to the Brain: Insights From Neuroimaging** Robin A., M.D. Hurley, Katherine H., Ph.D. Taber  
*Windows to the Brain* is the only book to synthesize neuroanatomical and imaging research as it pertains to selected neuropsychiatric diseases, containing all of the Windows to the Brain papers published from 1999-2006 in the *Journal of Neuropsychiatry and Clinical Neurosciences*. They provide a basic understanding of how to apply a variety of imaging techniques to the study of adult neuropsychiatric disease and how to use neuroimaging to assist in diagnostic work-ups for conditions ranging from sleep disorders to epilepsy to borderline personality.

Integrated, color-coded graphics present functional anatomical information in a manner that promotes understanding and use in clinical practice, while the text encompasses a wide range of diseases and injuries across the adult lifespan where imaging techniques have contributed to better understanding them. The text is organized into four sections that will help readers increase their appreciation of the wide range of research and clinical applications for imaging in neuropsychiatry: chapters on imaging techniques discuss underlying principles, strengths and weaknesses, and applications; chapters on specific diseases demonstrate a range of investigative techniques; anatomy/circuit chapters focus on particular brain structures or functional neuropsychiatric circuits; and final chapters present image-based approaches to understanding or selecting treatment options.
