## Methods of Randomization in Experimental Design (Quantitative Applications in the Social Sciences)

Valentim R. Alferes

In **Methods of Randomization in Experimental Design**, author **Valentim R. Alferes** presents the main procedures of random assignment and local control in between-subjects experimental designs and the counterbalancing schemes in within-subjects or cross-over experimental designs. Alferes uses a pedagogical strategy that allows the reader to implement all randomization methods by relying on the materials given in the appendices and using common features included in most word processor software.

A companion website at [www.sagepub.com/alferes](http://www.sagepub.com/alferes) provides downloadable IBM SPSS and R versions of SCRAED, a package that performs simple and complex random assignment in experimental design, including the 18 randomization methods presented in Chapters 2 and 3.
