Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics)

Douglas S. Bridges

Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics) Douglas S. Bridges

A complete course on metric, normed, and Hilbert spaces, including many results and exercises seldom found in texts on analysis at this level. The author covers an unusually wide range of material in a clear and concise format, including elementary real analysis, Lebesgue integration on \mathbb{R} , and an introduction to functional analysis. The book begins with a fast-paced course on real analysis, followed by an introduction to the Lebesgue integral. This provides a reference for later chapters as well as a preparation for students with only the typical sequence of undergraduate calculus courses as prerequisites. Other features include a chapter introducing functional analysis, the Hahn-Banach theorem and duality, separation theorems, the Baire Category Theorem, the Open Mapping Theorem and their consequences, and unusual applications. Of special interest are the 750 exercises, many with guidelines for their solutions, applications and extensions of the main propositions and theorems, pointers to new branches of the subject, and difficult challenges for the very best students.

From reader reviews:

Jordan Weatherspoon:

This Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics) usually are reliable for you who want to be described as a successful person, why. The reason why of this Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics) can be one of the great books you must have will be giving you more than just simple examining food but feed a person with information that might be will shock your previous knowledge. This book is handy, you can bring it everywhere you go and whenever your conditions at e-book and printed kinds. Beside that this Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics) giving you an enormous of experience for example rich vocabulary, giving you trial run of critical thinking that we all know it useful in your day activity. So , let's have it appreciate reading.

Alejandro Koenig:

Reading a reserve can be one of a lot of action that everyone in the world really likes. Do you like reading book so. There are a lot of reasons why people like it. First reading a guide will give you a lot of new facts. When you read a book you will get new information due to the fact book is one of numerous ways to share the information as well as their idea. Second, reading through a book will make you more imaginative. When you reading through a book especially tale fantasy book the author will bring someone to imagine the story how the character types do it anything. Third, you could share your knowledge to other individuals. When you read this Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics), it is possible to tells your family, friends and soon about yours reserve. Your knowledge can inspire different ones, make them reading a e-book.

Joyce Murphy:

The e-book with title Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics) contains a lot of information that you can study it. You can get a lot of help after read this book. This particular book exist new understanding the information that exist in this reserve represented the condition of the world at this point. That is important to yo7u to learn how the improvement of the world. This particular book will bring you in new era of the internationalization. You can read the e-book in your smart phone, so you can read it anywhere you want.

Kimberly Dyer:

Do you one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Try and pick one book that you find out the inside because don't determine book by its cover may doesn't work here is difficult job because you are frightened that the inside maybe not while fantastic as in the outside seem likes. Maybe you answer can be Foundations of Real and Abstract Analysis (Graduate Texts in Mathematics) why because the wonderful cover that make you consider with regards to the content will not disappoint an individual. The inside or content is definitely fantastic as the outside or cover. Your reading

sixth sense will directly direct you to pick up this book.
