This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 Excerpt: ...arched, with a short neck. They are dark or pale-red with winered or yellow pedicels, and short-beaked, conical lids, becoming deeply furrowed, inclined, and contracted below the mouth when old. There is but one row of teeth, each tooth being cleft into two equal and strongly jointed segments, which suggest the generic name Ceratodon, a compound of two Greek words, ??p??, ??????, a horn, and oSwv, a tooth. The two characteristics by which one may feel sure that his moss is a horn-tooth, are the cleft teeth and the shape and grooving of the spore-cases. There are eighteen species in all, one common in North America. The Purple Horn-tooth Moss, *Ceratodon purpureum*, Brid.--See Colour Plate IV. c-Habit and babitat.--Look for the Purple Horn-tooth Moss on rocky ledges in open sunny places of the woods, in pastures and along roadsides, and in vacant city lots. Bright-green cushions of this moss may be found in depressions of the rocks during February and March. At this time the pedicels are often numerous and well-grown and their wine-red colour makes the moss conspicuous even while the spore-cases themselves thus early in the season are but little larger in diameter than the pedicels and are concealed by their veils. With the approach of warmer weather they mature rapidly still carrying their transparent veils. These are discarded before a great while and then the spore-cases and their conical short-beaked lids are glossy and wine-red. Later the lids fall, exposing a fringe of hornlike teeth about the rim. The sporecases finally become deeply furrowed, inclined, and contracted below the mouth and in this condition may be found during most of the year. Name.--The specific name *purpureum* is the Latin for ...
